※ **The requirement about mobilephone operation system version**

Android users: support the original operating system Version 4.44 or higher. (Settings-About Device, view the android version) Iphoneusers: supportversion 8.0 orhigher. (Please update your phone if it's not 8.0 version, you can find it in mobile phone setting-general-about)

How to download Fundo

How to get the Fundo APK for Iphone and Android users

1. For both Android and Iphone users: Scan the QR code on watch or user manual through smart phone or Qqsweeping function to download and install on phone:

※ **Tips:**
WeChat only supports QR code scanner to read, doesn't support downloading. Please make sure your phone have enough memory space and the operating system version is supported

2. Download the Fundo Wear from Google play store and APP store;

Android phone → Google play store → Fundo Wear

Iphone → APP store → Fundo Wear

※ **Fundo Wear register and log-in, bluetooth connection**

1. After installing the Fundo Wear, enterinto mobile phone setting -bluetooth-open(Andriod should be visiable,Iphone should open location services,setting-privacy-location services-on

2. Open Fundo Wear afer completing thephone settings, login screen will popup, you can register by email, or login by QQ/WeChat account.

3. Enter into the Fundo interface, click the"+"at the right bottom corner,bluetooth icon will appear, click it tosearch.After seraching,click the watch name to connect,a pairing message will come out, choose "Pair".Fundo connection is successful,Android users can use all the functions on SmartWatch.

4. For iphone users, after connectingwith the Fundo successfully, enter into phone settings-bluetooth-on, search the watch name and connect, pairing message will come out, choose "pair",then you can use all thefunctions on watch.

※ **Tips**

For Iphone Users, when Fundo occurs flash back,please make sure your location services is on

Please make sure your Fundo is register successfully, or the releventdatas can't be sync

If there is noprompt message during bluetooth connecting, maybe because connectthe wrong device.You can open thesettings-about on watch, and check ifthe bluetooth device address is thesame as your connected device.If not, please choose the right one.
