SMART MUSIC WATCH USER MANUAL

Function Operation:

1. Connect the Watch with the Bluetooth Playing Equipment

This smart watch has the function of powering on/off. Long press the top-left button to power it on/off. Before using this bluetooth MP3 watch, pls power it on firstly. When powering it on, the blue light at the position of 6:00, will flash. Afterwards, the green light and blue one will flash alternately, when the watch enters the status of bluetooth pairing. At that time, pls open the bluetooth earphone or equipment for paring. After the searching and pairing of the bluetooth are finished automatically, the blue light will flash slowly, for entering the mode of music playing. You can short press the top-right button once, for playing the next song, while you can also short press the top-right button twice, for playing the previous song. And you can also stop music playing by short pressing the top-left button twice.

Notice: In order to ensure the fluent playing of the songs of the bluetooth MP3 watch, pls try your best to wear the bluetooth earphone at your same side as the watch when wearing the earphone for using.

2. Connect the Watch with the Computer

The watch can be connected with the computer only when it is powered on. It is with built-in 4GB memory and it support the memory up to 32GB maximumly.

3. Download and Install Watch APP/APK Client Software

As for the Apple mobile phones, pls search "DayDay Band" in the Apple store, download and install the watch APP ; As for the Android mobile phones, pls search "DayDay Band" in the google play store, 360 phone assistant, or the baidu phone assistant etc.in China. Also u can scan the QR code as follows , then download and install client APP/APK software "DayDay Band" for watch.

Online upgrade

the powering on/off the watch. Unless there is no power with the watch. When entering the APP, pls click the Settings icon on the top left corner of the home page. Select to search the equipment, the program will automatically search bluetooth devices nearby. And u can also gently slide the refreshing interface down, It will automatically search the bluetooth devices. Pls click it to connect the bluetooth of the watch with your phone when the " FOXWEAR " appears on the APP. After the bluetooth is connected successfully, the LED indicator light at the position of 12:00, within the watch dial, will vibrate and blink, and the APP/APK will automatically switch to the main interface.

Note: you can modify the name of the bluetooth devices on the APP.

5. Start to Use the Smart Watch

After the bluetooth of the watch is connected to the mobile phone successfully, it will begin to record your exercise and sleep status.

Note: The watch will automatically start to detect the sleep data after 6 pm, no sleep data during the day. When firstly using it, the watch needs to be connected with the APP, to calibrate the the watch data and it will sync the time automatically. Or the data of step calculation and sleep will be inaccurated.

6. Data Synchronization

Pls enter the menu interface of the pedometer and sleep, slide down the menu, the watch data of step calculation and sleep will be synced in the APP/APK of mobile phone. It will also be showed at the corresponding position there. Also the watch will automatically synchronize step and sleep data regularly when it is connected with Bluetooth(The APP/APK will show the sleep data information after u have slept for 3 hours), so as to ensure the data is synced onto the main menu in the real time.

7. Charging

When there is no vibration reminding with the watch and the APP/APK alarms about low battery, pls use its USB cable to connect with the computer or use its USB cable along with 5V domestic charger, to charge it timely.

Or if u find the hands of clock stops walking, it means that the battery of the quartz watch has been depleted (this battery needed to be replaced usually around every 2 years). Please timely replace the battery for the watch. When changing the battery, please use the same type of battery and try your best to ask the professional or the repair man of the watch repair shop to replace it for your watch. When disassembling, pls use the specialized tools to open the rear cover of the watch.

8. Remarks:

- 1.The product adopts IP67 waterproof design, can be used under the situation of normal water resistance for daily life. But it is forbidden to be exposed to the water or be immersed under the water for a long time.
- 2.If you find that there is no change for the data, please wait patiently for the data synchronization. It will takes some time for the synchronous data to be uploaded.
3. In view of the limited memory of the watch, the watch usually can only save 7-day exercise data. Please regularly connect the bluetooth to the mobile phone, so you can upload and sync the data to your mobile phone with bluetooth, for saving.
